

DEPLOYMENT GUIDELINE

For the collection of the equipment by a carrier, it must be provided as follows:

- The equipment to be picked-up, including accessories, must be made available for pick-up at a central location. This should be at ground level, close to the exit and accessible by lift truck and pallet. Steps and elevators are to be avoided if possible.
- If data erasure (eraSURE®/eraSURE®+) is planned for the devices, the devices must be provided unpacked. The barcode on the respective device should be easily accessible so that the devices can be scanned during pick-up.
- The equipment to be picked-up, including accessories, must be provided sorted by equipment type and clearly marked as being ready for pick-up.
- For information on providing accessories, please refer to the Return Guideline.

Examples of possible staging for pick-up:
